

Guildford and Waverley

The Spend and Outcome Tool (SPOT) gives organisations in England an overview of spend and outcomes across key areas of business.

The profile supports understanding of the overall relationship between spend and outcomes, by identifying areas of significant variance which are likely to require more in-depth analysis.

SPOT includes a large number of measures of spend and outcomes from several different frameworks. A number of different benchmarks are used to provide a range of peer comparisons.

SPOT has been developed as part of the Public Health England health economics programme.

A video introduction to the use of SPOT is available on the SPOT website.

CCG financial data cannot be compared between years (see FAQ).

Z score:

A z score essentially measures the distance of a value from the mean (average) in units of standard deviations. A positive z score indicates that the value is above the mean, whereas a negative z score indicates that the value is below the mean. A z score below -2 or above +2 may indicate the need to investigate further. Each dot represents a programme budget category.

Interpreting the chart:

Each dot represents a programme budget category. The outcome measures on the chart have been chosen because they are reasonably representative of the programme as a whole. This means that for Other and Total programmes no outcome data is available. The source data for the outcome measures shown on the chart can be found in the Spend and Outcome Tool.

A programme lying outside the solid +/- 2 z scores box, may indicate the need to investigate further. If the programme lies to the left or right of the box, the spend may need reviewing, and if it lies outside the top or bottom of the box, the outcome may need reviewing. Programmes outside the box at the corners may need a review of both spend and outcome. Programmes lying outside the dotted/thin +/- 1 z score box may also warrant further exploration.

Details of the specific spend and outcome measured used are available in the Reference tab.

■ Guildford and Waverley ■ East Leicestershire and Rutland

■ Guildford and Waverley ■ East Leicestershire and Rutland

Interpreting the chart:

This chart shows spend and outcome z scores for each programme for both the organisation and a chosen comparator organisation.

The default chosen comparator is one of the nearest neighbours to the organisation on a number of measures.

If a programme spend z score is less than -2 then the organisation spend is significantly less than other organisations on this programme. If the programme spend z score is more than +2 then the organisation spend is significantly more than other organisations on this programme.

The programme outcome may be a single measure, or a weighted combination of measures.

If the programme outcome z score is less than -2 then the organisation has a worse outcome than other organisations. If the programme outcome z score is more than +2 then the organisation has a better outcome than other organisations.

Spend and outcome tool: Outliers summary

Organisation

Guildford and Waverley

Type

CCG

Period

2015

	Spend	Outcome
Low/worse	0	4
High/better	1	14
No data	0	1
All measures	69	215

This table shows all specific measures where the organisation appears to be an outlier, or where no data is available. The organisation is categorised as an outlier on a measure if the organisation value is outside the boxplot whisker or z score is beyond +/- 2. Spend is low for low outliers and high for high outliers. Outcomes are worse for worse outliers and better for better outliers. On all other measures, the organisation is not considered an outlier. Where there is no data for a measure, the organisation may wish to explore the reasons behind this. This may help in identifying specific elements of a programme to focus on. They can be explored further in the boxplots and "Detail Quadrant".

Programme	Source	Measure	Label	Value	National quartile	Status
Infection						
	Outcome	PI003	% children vaccinated for MMR by 2nd birthday	84%	88%	worse outlier
	Outcome	PI004	% children vaccinated for MMR by 5th birthday, 2nd dose	76%	81%	worse outlier
	Outcome	PI005	% children vaccinated for whooping cough by 1st birthday	88%	91%	worse outlier
Cancers						
	Outcome	CCG OIS 1.9 M	Mortality from cancer. <75yrs, DSR, males.	91	128	better outlier
	Outcome	CCG OIS 1.19 P	% Record of lung cancer stage at decision to treat	70%	79%	worse outlier
Endocrine						
	Outcome	QOF DM 32	Register of diabetes with type (DM001 / DM19/32)	4.3%	6.3%	better outlier
	Outcome	CCG OIS 2.8 P	Complications associated with diabetes	66	97	better outlier
Circulation						
	Spend	SP10c	Problems of Rhythm	£9	£7	high outlier
	Outcome	NOF1ihd_P	Potential years of life lost - Ischaemic Heart Disease	372	674	better outlier
	Outcome	QOF BP001	% aged 40+ with BP in last 5 years (BP001)	83%	96%	better outlier
	Outcome	CCG OIS 1.1 IHD	DSR (PYLL) from Ischaemic heart diseases amenable to healthcare	372	674	better outlier

Programme	Source	Measure	Label	Value	National quartile	Status
Respiratory System	Outcome	CCG OIS 1.2 P	Mortality from cardiovascular disease. <75yrs, DSR, persons.	42	66	better outlier
	Outcome	CCG OIS 1.2 M	Mortality from cardiovascular disease. <75yrs, DSR, males.	57	88	better outlier
	Outcome	CCG OIS 3.3 VV	Varicose Veins, EQ-5D, Health Gain			No data
	Outcome	APHO 03	COPD prevalence	2.2%	3.5%	better outlier
	Outcome	CCG OIS 1.6 F	Mortality from respiratory disease. <75yrs, DSR, females.	10	24	better outlier
Gastro Intestinal						
Healthy Individuals	Outcome	CCG OIS 1.7 M	Mortality from liver disease, <75yr, DSR, males	9	20	better outlier
	Outcome	QOF OBESITY 1	Register of BMI 30+ (OB001 / OB01)	5.2%	9.7%	better outlier
	Outcome	CCG OIS 2.1 P	Av health status (EQ-5DTM) for adults with a long-term condition	0.80	0.74	better outlier

Interpreting the chart:

In this boxplot, the chosen organisation is represented as a red diamond and the upper and lower quartile boxes represent the middle 50% of authorities' spend. The white line through the middle of the quartile box is the median.

The whiskers extend 1.5 x the interquartile range, up to the max/min values. Organisations outside the whiskers are categorised as outliers. NB: Whiskers are not the same as confidence limits.

Boxplots are provided for a number of peer comparator sets. This should assist in determining which peer groups the organisation is similar to and not similar to for each measure. It may suggest areas to look at when exploring variation.

About SPOT and its use

This profile provides some understanding of how the overall organisation budget is allocated to different programmes and sub-programmes; how this relates to the outcomes for those programmes and how the organisation performs in comparison to its peers.

The quadrant charts highlight particular programmes and sub-programmes where the organisation appears to be an outlier on spend and/or outcome.

The spine charts give headline values for spend and key outcomes for major programmes, and relevant comparator values.

The spend bar chart gives an indication of the size of the spend on each programme in both the organisation and a comparator organisation (default - nearest statistical neighbour)

The outlier summary identifies all measures where the organisation appears to be an outlier, or has submitted no data. These are grouped by programme. It is possible to explore measures in more depth by reviewing them using the detail quadrant chart.

Using the pdf profile and then Excel spreadsheet tool should help to:

- understand the size of spend on each major programme
- identify programmes where spend or outcomes are significantly at variance with peers (a range of comparators are available)
- identify potential areas within programmes where there may be issues

Following this the organisation may wish to examine priority areas in more depth.

The spend and outcome tool includes a frequently asked questions (FAQ) section as a spreadsheet tab which gives more detail about the tool and its use.
