Foreword

The Schools Health Education Unit (SHEU) is pleased to be able to produce your Report, which contains detailed information about the health beliefs and behaviour of your pupils.

The report compares the data collected from your pupils with those from a larger, wider sample.

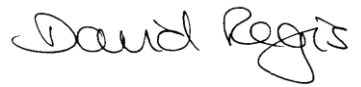

SHEU is sure that you, your colleagues, and your pupils will also find the information contained within this report to be of value in helping you to gauge some of the most important factors that affect the lives of our young people both now and in the future.

SHEU hope that your pupils found the experience of completing the questionnaire interesting and thought provoking.

Finally, SHEU would like to take this opportunity to thank you for your support and co-operation in agreeing to participate in this valuable research initiative.

Introduction

The Health-Related Behaviour Survey, developed by the Schools Health Education Unit, is designed for young people of primary and secondary school age. The surveys have been developed over 30 years by health and education professionals, and over a million school children have taken part. In the last ten years, over four thousand schools and colleges have participated. Data arising from the survey can be used to inform planning decisions as well being used in the classroom as the stimulus for discussion with young people.

This report should ideally be studied with reference to the original questionnaire and the survey results tables. The first is recommended because we may have paraphrased a question below for reasons of space, and the precise wording and position may be important for interpretation.

Preceding this report you should have received **The Survey Results Tables** (or online results), which contain more information than can be summarised here. You may want to refer to this if you want to look in more detail at the results of a particular question. The Survey Results Tables show the number of responses received for each question, which may be less than the total sample. Also in the Results Tables we show the results of each response for multiple-choice questions, whereas in this report answers may be selective or grouped.

A school's results are confidential and will not be shared with other organisations without the express permission of the school.

Additional services (graphs and discs) are available; please contact SHEU. In particular, we have designed a set of INSET workshops around different examples of using the questionnaire data. If you would like further details of these or have any comments on this report please contact us at the address on the front of the report.

If you would like further details about Government policy background, we have created an overview which can be downloaded from our website at: <http://sheu.org.uk/content/page/appendix>.

Comparison figures

In this report the data gathered from this survey have been compared with a larger sample from your area. For example, if your school is in Exeter then the wider data might be Surrey. This enables you to compare your results with others in the area and also go to the SHEU annual reports (summaries available at www.sheu.org.uk/publications) to find out about the UK statistics and trends.

If the figures in your survey have been compared with results from a reference sample, the reference figures are normally given second, and often in parentheses.

15% (20%) of the sample...

Your survey (Reference sample)

Administration

Staff in school will have been responsible for the classes selected for inclusion.

Anything special about the day of administration, or the pupils present and absent on that day, may affect the detail of the results.

The sample

This survey involved pupils from the following years. The numbers in each group are shown below.

	Surrey Downs		Surrey	
	Yr 8	Yr 10	Yr 8	Yr 10
Boys	156	162	673	482
Girls	139	135	563	437

If the sample you sent to Exeter for analysis was small, then it may have been aggregated by sex or year, or merged with a sample from another school or schools. This is done so that the figures are not too influenced by the behaviour of any one individual, and to ensure that the anonymity of the respondents is not compromised. If you would like to discuss this in more detail, please contact the Unit directly.

- ❑ 66% (68%) of pupils responded that they were away from school due to illness or injury in the 12 months before the survey, while 40% (41%) said they have been away due to doctor/dentist appointments.

EVERY CHILD MATTERS

- ❑ 45% (40%) of pupils responded that they think the school cares whether they are happy or not and 67% (68%) said their work is marked so they can see how to improve it.

Leisure

- ❑ 70% (74%) of pupils responded that they spent time watching TV after school on the day before the survey, while 65% (68%) did homework and 45% (47%) played video games.

- ❑ 60% (61%) of pupils responded that they listened to music after school on the day before the survey, while 28% (28%) said they met with friends.

Making a Positive Contribution

- ❑ 56% (58%) of pupils responded that they are asked for their opinions about what they learn in school; 39% (40%) said their opinions make a difference and 54% (52%) would like to be consulted more often.
- ❑ 54% (52%) of pupils responded that they are asked for their opinions about how they learn in school; 45% (44%) said their opinions make a difference and 53% (51%) would like to be consulted more often.
- ❑ 51% (49%) of pupils responded that they are asked for their opinions about the school environment; 48% (47%) said their opinions make a difference and 48% (47%) would like to be consulted more often.
- ❑ 33% (33%) of pupils responded that they are asked for their opinions about their community; 35% (32%) said their opinions make a difference and 43% (42%) would like to be consulted more often.

Significant Differences

Significant differences

Where differences can be seen between your school and the reference sample, you may find the enclosed table of some use in deciding if the differences seen are significant. The 'standard error' of a proportion is an assessment of how reliable our figures are, that is, the margin of error.

Two points in particular should be made:

1. when the sample size is small, it may be that just one individual voting a different way would make a large percentage difference to the results (so, one in twenty is 5%)
2. even if your sample is small, you may have a very high proportion of your available population – if, say, you sample every single pupil of your Year 8 class. In this case, the notion of 'margin of error' doesn't really apply to the sampling, only to the process of collecting the responses.

TABLE OF STANDARD ERRORS OF PROPORTION

		Percentage seen in sample				
		10%	20%	30%	40%	50%
Number	20	6.7	8.9	10.2	11.0	11.2
In	30	5.5	7.3	8.4	8.9	9.1
sample	40	4.7	6.3	7.2	7.7	7.9
	50	4.2	5.7	6.5	6.9	7.1
	60	3.9	5.2	5.9	6.3	6.5
	80	3.4	4.5	5.1	5.5	5.6
	100	3.0	4.0	4.6	4.9	5.0
	150	2.4	3.3	3.7	4.0	4.1
	200	2.1	2.8	3.2	3.5	3.5
	300	1.7	2.3	2.6	2.8	2.9
	500	1.3	1.8	2.0	2.2	2.2

So, if you have a sample of 50 students and 30% of them think that the school needs a new swimming pool, we can see from the table that standard error of the percentage is about $\pm 6.5\%$.

List of significant differences

Below we have listed some statistically significant differences between Surrey Downs and Surrey Secondary.

Sig	Your	Wider	Question
***	43%	31%	of pupils responded that they know where they can get condoms free of charge.

Pupil Comparisons

We have identified a few questions to consider in more detail to see how answers vary for different groups of students. We know that we get different answers depending on the age and experience of pupils and we also know that boys and girls often give different answers, for example to the physical activity questions, with boys in general being more active than the girls.

For each example, the question we are looking at is listed at the top of the table and beneath that, the question responses we are identifying are shown with the sample sizes involved.

The sample size for each table is shown in bold at the top of each column (overall Surrey Secondary data in brackets).

Question	Q3. Which adults do you live with?		
Answer options	'Mum & Dad together'	Other (not Mum & Dad)	Overall
Sample sizes	247 (2753)	155 (1747)	403 (4523)
Pupils who responded that they currently have free school meals.	7% (5%)	12% (17%)	9% (10%)
Pupils who responded that they are a 'young carer'.	4% (4%)	5% (8%)	5% (6%)

In the example above, 247 pupils in this school live with both parents together and 155 pupils don't.

When we look at the question which asks if they have free school meals, 9% of the whole school sample said they were compared with (10%) in the wider county sample. Breaking this down further by who they live with, 7% of pupils in this school who live with both parents had free school meals compared with 12% of pupils who don't live with both parents together.

Considerations

When interpreting the differences between the groups we have listed it is important to consider what else might have had an impact on the results. For example, girls generally record lower levels of high self-esteem so the observed differences may have more to do with gender differences than low/high self-esteem differences.

We hope that the following pages are useful, particularly as evidence for inequalities. If you need any help in interpreting the data, please don't hesitate to contact us at the unit.

Pupil Comparisons

The first comparison is between those who said they live with both parents together compared with those who didn't. The sample size for each table is shown in bold at the top of each column. (Surrey Secondary data in brackets).

For an overall 'control' score SHEU add together the scores for the two 'controlling' items (a + c) and take away the score for the two 'chance' items (b + d). This gives a score, in the jargon, of 'health locus of control', whether a person sees themselves as being generally in control of their health or not. If not then this fatalism may make health warnings irrelevant.

Q12. Aggregate health locus of control score:

80% (78%) of pupils responded that they are in charge of their health, while 47% (46%) said that even if they look after themselves, they can still easily fall ill.

Q12. Percentage of pupils responding that they 'agree' with the following statements (Surrey Secondary data in brackets):

	Year 8		Year 10		Total
