

Health Equity Audit - HMP Coldingley

1 Definition

Data obtained as part of the HSCNA process in each of the five Surrey prisons all contributes to the overall understanding of health equity. For simplicity, this document supplements the HSCNA and summarises the findings explicitly relevant to health equity.

The difference between equality and equity must be emphasised. Although both promote fairness, equality achieves this through treating everyone the same regardless of need, while equity achieves this through treating people differently dependent on need. However, this different treatment may be the key to reaching equality.¹

2 Scope

The scope was to consider any equity issues which may affect access to prison healthcare services.

The Equality Act 2010 details nine 'protected characteristics'. Prisons are a unique environment; the table below details these characteristics and notes which apply in HMP Coldingley. The table then goes on to note other characteristics which the HSCNA process identified could place residents at a disadvantage.

Characteristic	Comment
Race	Relevant in HMP Coldingley
Sex	This is a prison for male prisoners, though some may identify differently. This issue is picked up under gender reassignment below.
Gender reassignment	Relevant in HMP Coldingley
Age	Relevant in HMP Coldingley
Religion and belief	Relevant in HMP Coldingley
Disability	Relevant in HMP Coldingley
Sexual orientation	Relevant in HMP Coldingley
Marriage or civil partnership	No evidence that it is relevant in HMP Coldingley. Whilst contact with partners, family and friends is important, legal status does not impact.
Pregnancy and maternity	Not relevant in HMP Coldingley
Literacy	Relevant in HMP Coldingley
'Complex needs'	This is a collective term used to describe a mixed cohort, who for various reasons struggle to cope and without specific attention could be overlooked. Relevant in HMP Coldingley
Those with current health needs	Some residents have few if any health needs. Others have many- be they physical, mental, related to addictions or social care. Frequent users will be most impacted by any issues.

3 Methodology

Under normal circumstance most of the information for this briefing would be obtained in patient focus groups, alongside conversations with a range of stakeholders including residents and officers, and observation whilst visiting the establishment.

¹ Definition from [Social Change UK](#) (accessed 14.12.2020)

As a consequence of covid-19 the entire project was conducted remotely. We were able to obtain input from residents via a survey, but this did not identify any specific issues of equity, whilst the overall return rates were good, the number from, say, older residents or those identifying as having a disability were not enough to inform a statistically significant difference. A review of the free text answers did not lead to any conclusive findings.

This briefing, therefore, largely draws on structured interviews from the HSCNA process and data alongside information gleaned from HMIP reports

4 COVID-19

The full HSCNA was written during the second wave of the covid-19 pandemic. It is beyond the scope of this document to comment specifically on how the pandemic has affected access to and delivery of healthcare (please refer to the HSCNA); however, it is noted:

Coronavirus (covid-19) has not only replicated existing health inequalities, but in some cases has increased them through its disproportionate impact on certain population groups.²

Residents have spent up to 23¼ hours per day locked in their cells. A wide range of healthcare and allied services have been restricted due to the impact of covid-19 measures. The restrictions will not have impacted all residents equally.

By its very nature healthcare in prison environment presents a challenge in terms of service delivery. [The NHS long-term plan](#)³ aims to reduce health inequalities which includes that provided within the secure estate. Prison healthcare is based on the principle of equity with community health as far as is practicable.

² [Public Health England \(2020\) Disparities in the Risk and Outcomes of COVID-19](#) (accessed 9.12.2020)

5 Health Equity in HMP Coldingley

5a Equity with the community

A consistent key aim of current government focus and policy is to reduce health inequalities.⁴

In 2016, NHS England set out three aims directly relating to equity:

- narrow the gap between those in criminal justice and detained settings and the rest of the population in terms of health and care outcomes, through improved support from all health and social care
- reduce the number of people who are detained as a result of untreated health problems, and so support reductions in offending
- ensure continuity of care post release, and so support reductions in re-offending⁵

This sits within a wider duty to address health inequalities that is detailed in NHS England guidance.⁶

The aim of 'equivalence' between community and prison healthcare was established in 2001.

*Prisoners should have access to the same range and quality of services appropriate to their needs as are available to the general population through the NHS.*⁷

In 2008, prison health performance indicators were developed to measure the quality of prison health services and to help meet the objective of giving prisoners *the same range and quality of healthcare as the public receives from the NHS.*⁸

The following table considers access to healthcare in the prison in the context of access from within the wider community.

	Equivalence with Community	Comments on Equity in HMP Coldingley (who might not have equitable access, what are barriers)	Recommendations
Access to all healthcare	Application is largely in writing. Most healthcare provision is in core hours.	Noting that a proportion of residents will have poor literacy. The apps had recently been reviewed to make them easier to read and with added pictures. Additionally, some residents would visit healthcare themselves to book an appointment. There are mixed views about the opening times for healthcare and access for those who work.	Use the full range of patient feedback to confirm that patients are able to make applications and attend appointments. See Recommendation 2 in the HSCNA <i>'Review the overall healthcare delivery model as part of the recovery from covid-19.'</i>
Access to GP	GP appointments are available within the same, or a faster timescale than is typically seen in the community	Access to the GPs is via nurse triage. Some residents complain about this. However GP waits are reported to normally be less than two weeks, but have increased during the pandemic.	Triage ensures efficient use of GP resources. Retain.
Access to dentistry, physiotherapy, podiatry, GUM and optician services	Both in the community and in secure settings, these types of services have all been severely disrupted by the pandemic	As a consequence of the pandemic there are long (and growing) waiting lists for these services. It appears that all residents requiring these services are equally disadvantaged. We learned that pre-covid, dentistry only managed to keep on top of demand by delivering an additional, non-commissioned service. Interviewees stated that, had they not done this, the waiting lists would have been far longer than in neighbouring prisons.	Explore opportunities for additional clinics once the current restrictions are lifted. See Recommendation 4 in the HSCNA, <i>'increase the commissioned dental provision to at least three sessions per week, with optional extra sessions to limit waiting lists appropriately.'</i> The HSCNA also contains recommendations to increase physiotherapy and podiatry input.
Access to Substance Misuse Treatment	The same range of substance misuse treatment services are available as would be found in the community.	Group work and fellowship meetings are suspended due to the pandemic. In the community patients can access mutual aid/group support via the 'phone and video call.	

Access to Mental Health Support	There is no access to IAPT-type provision and mental health support is focused on those with a diagnosable disorder.	<p>Normally, self-referrals need to make written applications to the mental health team, disadvantaging those with poor literacy. Since the start of the pandemic, the mental health team has been seeing new arrivals in reception, meaning that residents do not have to proactively make a written self-referral to the team.</p> <p>The HSCNA identifies a gap in provision with little primary mental health provision.</p>	See Recommendation 11 in the HSCNA, <i>'The model of mental health provision at HMP Coldingley needs to be reviewed and resourced so as to respond to the full range of needs there.'</i>
---------------------------------	--	--	---

The HSCNA draws attention to the multidisciplinary complex case meetings which aim to identify and support residents who may otherwise be struggling.

The survey notes that compared to similar prisons, residents in HMP Coldingley appear a little less likely to report knowing how to access services. This may be a consequence of the current restrictions, meaning residents are out of their cells less, less able to see notices or talk with peers.

5b Equity with reference to protected characteristics and other factors

Characteristic	Comment
1. Race	<p>The HSCNA broadened this to consider both ethnicity and race. The HSCNA notes that <i>'the profile of residents in HMP Coldingley is very ethnically diverse compared to that of prisoners nationally, with 57% of residents recorded as being from white ethnic backgrounds, compared to 72% nationally.'</i>⁹The HSCNA offers more detail. Our survey explored residents' views of healthcare, both access and the service received. The questions did not allow distinction for comparison of answers by ethnicity or race; we only select a few questions and also the sample size would have been too small for valid comparison. The free text comments did not indicate any specific issues related to equity of access; there were comments about waiting times and so on, but these were generic. The full HMIP Inspection report dates back to 2017¹⁰. At this time the annex which describes survey responses did identify that BAME, Foreign National and Muslim respondents all reported that they found accessing a doctor less easy than their counterparts. All differences were great enough to be statistically significant. BAME, Foreign National and Muslim respondents all reported that they found accessing a nurse more difficult, though the difference was only statistically significant for Muslim respondents.</p> <p>Whilst the low numbers meant the differences were not statistically significant, the HMIP survey found some differences between BAME and White respondents.¹¹</p>

Characteristic	Comment															
	<table border="1"> <thead> <tr> <th>Question</th> <th>BAME</th> <th>White</th> <th>Foreign National</th> <th>British</th> </tr> </thead> <tbody> <tr> <td>It is very/ quite easy to see a doctor</td> <td>31%</td> <td>56%</td> <td>25%</td> <td>48%</td> </tr> <tr> <td>It is very/ quite easy to see a nurse</td> <td>60%</td> <td>67%</td> <td>50%</td> <td>66%</td> </tr> </tbody> </table>	Question	BAME	White	Foreign National	British	It is very/ quite easy to see a doctor	31%	56%	25%	48%	It is very/ quite easy to see a nurse	60%	67%	50%	66%
Question	BAME	White	Foreign National	British												
It is very/ quite easy to see a doctor	31%	56%	25%	48%												
It is very/ quite easy to see a nurse	60%	67%	50%	66%												
2. Gender reassignment	<p>The HSCNA identifies that there are a small number of transgender residents in HMP Coldingley. The report states: <i>CNWL are currently investigating the pathways for transgender residents in the men’s prisons, and the findings will help further inform the development of these pathways. Our discussions with prison and health staff highlight some potential issues to consider.</i></p> <p><i>Transgender residents may have health needs (e.g. for screens or treatments) from their birth gender as well as their current gender. These may be interventions their current prison does not routinely (possibly never) consider or carry out. It is important that each transgender resident’s health needs are carefully considered with regard to both genders, e.g. with age-related screening for certain cancers.</i></p> <p><i>Specialist services for transgender people are comparatively few and far between. If a transgender resident is actively involved in secondary care (e.g. if transitioning), then this care may be at a considerable distance from their prison. This may necessitate an unwanted transfer of secondary care or logistical problems in accessing the existing secondary care. Telemedicine may offset some of this. This applies as much to specialist psychological support as it does to physical health.</i></p> <p><i>Release planning can also be difficult due to the relative paucity of specialist services in the community.</i></p> <p>The report recommends: Ensure transgender pathways are fit for purpose.</p>															
3. Age	<p>The HSCNA states: <i>HMP Coldingley has a slightly younger age profile compared to the national average for male residents with 15% percent of the population of HMP Coldingley being aged 50 or over; this compares to 17% nationally. HMP Coldingley has more residents in their 30s than the national average. This age profile fits its role as a working prison; a younger profile is less likely to have the kind of longer-term health issues which are correlated with age and that would exclude them from work.</i></p> <p>The report found no equity issues affecting any specific age group.</p> <p>The HMIP survey Reported the following</p> <table border="1"> <thead> <tr> <th>Question</th> <th>Aged 50 and over</th> <th>Aged under 50</th> </tr> </thead> <tbody> <tr> <td>It is very/ quite easy to see a doctor</td> <td>60%</td> <td>41%</td> </tr> <tr> <td>It is very/ quite easy to see a nurse</td> <td>72%</td> <td>62%</td> </tr> </tbody> </table>	Question	Aged 50 and over	Aged under 50	It is very/ quite easy to see a doctor	60%	41%	It is very/ quite easy to see a nurse	72%	62%						
Question	Aged 50 and over	Aged under 50														
It is very/ quite easy to see a doctor	60%	41%														
It is very/ quite easy to see a nurse	72%	62%														

Characteristic	Comment									
4. Religion and belief	<p>Our team used to enquire about religion and belief. We wrote many HSCNAs where we consistently found this had no bearing on access to health care or on the service providers. We note that some beliefs can impact on patient choice, but so do many other factors As noted, the 2017 HMIP survey results raised some concerning issues in respect of Muslim residents.</p> <table border="1"> <thead> <tr> <th>Question</th> <th>Muslim</th> <th>Non-Muslim</th> </tr> </thead> <tbody> <tr> <td>It is very/ quite easy to see a doctor</td> <td>29%</td> <td>49%</td> </tr> <tr> <td>It is very/ quite easy to see a nurse</td> <td>48%</td> <td>67%</td> </tr> </tbody> </table>	Question	Muslim	Non-Muslim	It is very/ quite easy to see a doctor	29%	49%	It is very/ quite easy to see a nurse	48%	67%
Question	Muslim	Non-Muslim								
It is very/ quite easy to see a doctor	29%	49%								
It is very/ quite easy to see a nurse	48%	67%								
5. Disability	<p>In common with many other prison HSCNA we found the definitions and recording of disability to be very inconsistent. The conclusion from the report is that the departments in the prison do not have a clear understand of the numbers of residents with disabilities, that there is no consistency between departments and that without this knowledge it is not possible to target information and responses to respond to needs.</p> <p>The 'buddy scheme' via which peers help each other is largely suspended due to the pandemic. It was not clear how residents are able to access the sort of help this scheme offers at present (carrying meals, cleaning etc).</p> <p>The HMIP Survey noted the following differences</p> <table border="1"> <thead> <tr> <th>Question</th> <th>Consider themselves to have a disability</th> <th>Do not consider themselves to have a disability</th> </tr> </thead> <tbody> <tr> <td>It is very/ quite easy to see a doctor</td> <td>48%</td> <td>44%</td> </tr> <tr> <td>It is very/ quite easy to see a nurse</td> <td>66%</td> <td>63%</td> </tr> </tbody> </table>	Question	Consider themselves to have a disability	Do not consider themselves to have a disability	It is very/ quite easy to see a doctor	48%	44%	It is very/ quite easy to see a nurse	66%	63%
Question	Consider themselves to have a disability	Do not consider themselves to have a disability								
It is very/ quite easy to see a doctor	48%	44%								
It is very/ quite easy to see a nurse	66%	63%								
6. Sexual orientation	<p>The equalities team did not supply sexuality data. The report drew on the now rather dated HMIP data, which described 1% of respondents in HMP Coldingley identifying themselves as 'homosexual' or 'bisexual' (terminology is as used by HMIP). This was lower than the proportion reported in comparator HMIP data (4%) and the national data which also describes 96% of male prisoners as heterosexual.¹²</p>									
Literacy	<p>With less time out of cell during the pandemic, we are concerned that patients have fewer opportunities to have someone else read and write for them. Healthcare has recently reviewed application forms to make them easier to use and read.</p>									
'Complex needs'	<p>This is a collective term used to describe a mixed cohort, who for various reasons struggle to cope and without specific attention could be overlooked. Relevant in HMP Coldingley.</p>									
Those with current health needs	<p>Some residents have few if any health needs. Others have many- be they physical, mental, related to addictions or social care. Frequent users will be most impacted by any issues.</p>
